Category	Software	O/S	WinX	Last Modified	07/27/05
Author	JA/SP				

Document Summary

Instructions on how to setup alternate menus using the AMM program.

Document Contents

Required ENV Line	1
Setting Up Alternate Menus using AMM	2
Showing the Same Menu on All Computers	3
Setting Up Groups	4

Required ENV Line

1. At Enter Program Name, type ENV.
2. Click Add Entry.
3. Type USE-ALT-MENU Y.
4. Hit <Enter>.
5. Click <Options=F5>, then click Save.
6. Exit BSMGR.
7. Go back into BSMGR.

Setting Up Alternate Menus using AMM

1. At Enter Program Name, type AMM.
2. You will have several fields listed. You will have 3 column fields where you can type a name for the column. These can be up to 20 characters. Example: Inventory / ML for Inventory and Mailing List programs.

3. The next option is a check box to "Show". You will check this if you want the button you customize to show. Under "Program", you will type the name of the program you want the button to launch. This can be up to 8 characters. Under "Description", you will type the description you want to use for the button. This can be up to 25 characters.

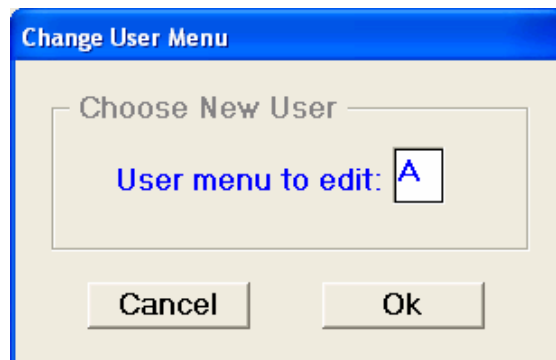

Show	Program	Description
<input checked="" type="checkbox"/>	IVM	Inventory Main
<input checked="" type="checkbox"/>	IVWO	Create a Work

4. You will customize each column as you wish with the programs and descriptions and whether you want to show them or not. If finished, you can click Save.

!!!NOTE!!! By using the ENV line in the first section "USE-ALT-MENU Y" means that each user will use their own menu based on the USER_NUM on that station. You have the ability to have all your stations show the same menu shown below in the "Showing the Same Menu on All Computers" section of this document or you may wish to setup multiple groups. Example: Receiving computers see the "R" menu and Front Liners see the "F" menu. To set this up, see the "Setting up Groups" section of this document.

Showing the Same Menu on All Computers

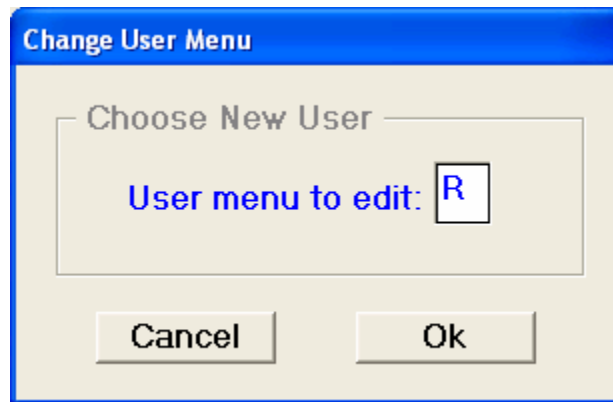

1. At Enter Program Name, type ENV.
2. Locate the entry "USE-ALT-MENU Y". Highlight the entry.
3. Hit <Enter>.
4. Change the Y to a unique # or letter.
Example "A" might mean All Computers meaning you want to show the same menu on all computers.
 - a. **NOTE:** Y and N cannot be used as a group type.
5. Hit <Enter>.
6. Click <Options=F5>, then click Save.
7. Exit BSMGR.
8. Go back into BSMGR.
9. At Enter Program Name, type AMM.
10. Click the button at the bottom of the screen labeled <Chg User=F6>.
11. In the "User menu to edit" field, type a unique # or letter.
Example "A" might mean All Computers meaning you want to show the same menu on all computers.
 - a. **NOTE:** Y and N cannot be used as a group type.

12. Click <OK>.
13. Now fill out the menus and click <Save=F5>. Exit BSMGR and go back in and the new menu should show on all computers.

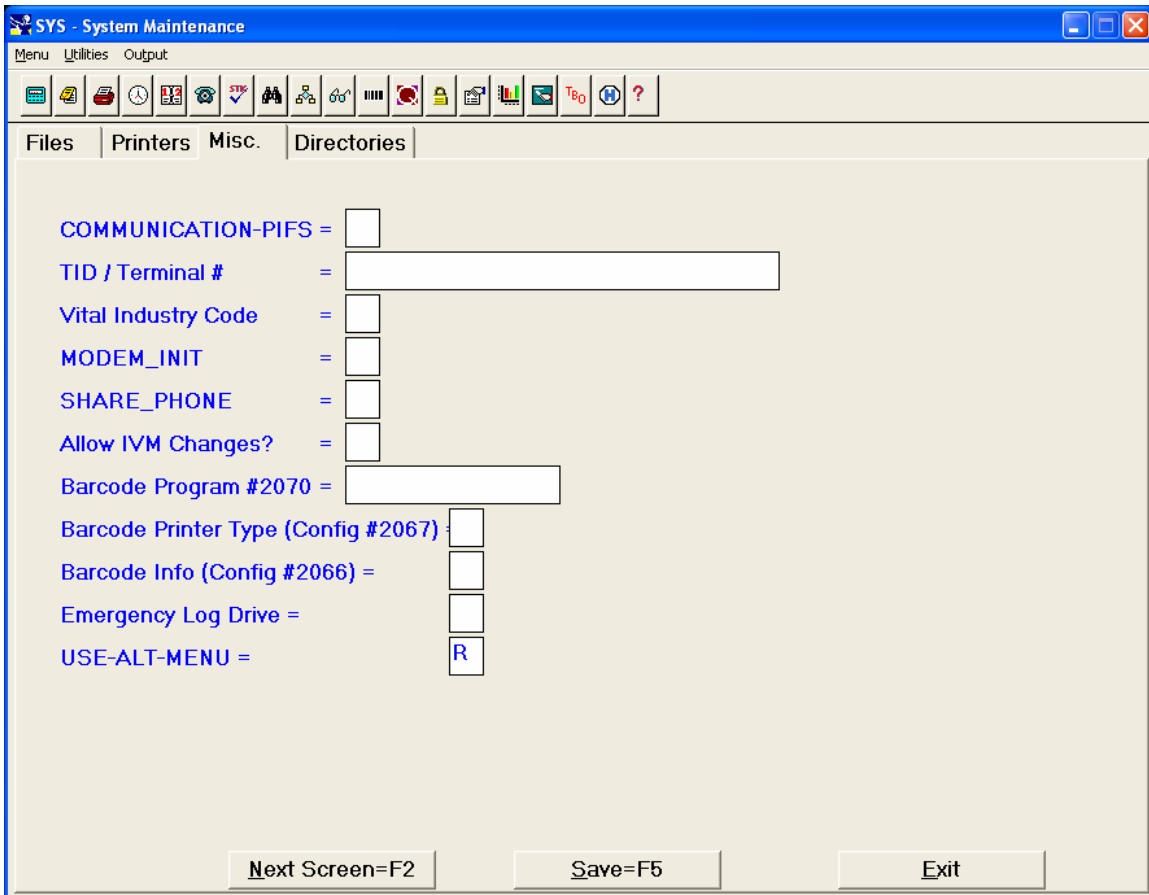

Setting Up Groups

1. At Enter Program Name, type AMM.
2. Click the button at the bottom of the screen labeled <Chg User=F6>.
3. In the “User menu to edit’ field, type a unique # or letter.
Example “R” might mean Receiving Group or “F” might mean Front Liners group.
 - a. **NOTE:** Y and N cannot be used as a group type.

4. Click <OK>.
5. Now fill out the menus for this group.
6. Click <Chg User=F6> again and do the same as above for any other groups you want to create.
7. Now Click <Save=F5>.
8. At each computer, go into BSMGR.
9. At Enter Program Name, type SYS. Go to Environment. Go to User's Station Environment. Click OK on User.
10. Click the 3rd tab "Misc".

11. Locate the label “USE-ALT-MENU” and to the right in the entry field type the unique # or letter for the group you created. For example, enter “R” if you want to use menu “R”.

12. Click <Save=F5>.

13. Exit BSMGR and go back in and you should see your Alternate Menu.
